Steve,

Thanks for the tip. I'll rename the .zip to .zzp. You should see the files shortly – I'm finishing them up now.

Thank you Roger.....you may have to send *.zzp to get past our firewall.

David,

I will get the Bifenthrin Special Study datasets put together and sent to you by e-mail today, likely in a .ZIP file holding an MS-Access database and in an Excel file.

Hi Roger,

That would be great if you could send just those data over. Could we do this via email?

Thanks,
David

David,
At some point, it was decided to remove those Bifenthrin Special Study samples/results from the central PDP 2012 Database, as we have done for other special surveys in the past. We have them stored in a separate database structure. The public-domain PDP 2012 database that is available for download from the PDP Website and that we make available with the PDP Database Search Utility does NOT include those Bifenthrin Special Study results. You may have received them as part of an early release of the 2012 data with the search utility before we removed them in preparation for the 2012 Annual Summary. If we provided a later, "final" version of the 2012 database with the search utility, those special survey results would have been excluded.

I thought we had provided you these data already, although I couldn't find any record of doing so just now. We could provide those data to you in a separate database now if you could use it. There are just over 43,000 data points related to 197 samples.

Hi Roger,

How did you end up setting the data apart from the regular PDP data on the Access
 Run – time disk you sent to me. Version 6.2 I believe.

Best,
David
